To: packet-radio@ucsd.edu

Found a bug in AmigaNOS 2.5 this morning.  When doing an FTP get command, if
the response coming back is a 500 permission denied, a trapped guru occurs.

John, KF0OU

This version like to hang on several oportunities, f.i.:

If you "record" an ax25 session and disconnect before you "record off"

nothing happens, even <CTRL><ALT><DEL> does notwork.
Resolving of well known addresses takes longer than with earlier versions.
Some SMTP session tend to hang.

--

Anybody nows how to implement the RSPF module to the rest?

I am looking for a source of mods for various radio equipment.  I know
for example that they can be obtained by packet from KJ6FY's server in
California, however, that seems to be stretching it a bit.

He alludes to the existence of other "local" servers in one of his
messages, but no further info is given, and I haven't been able to find
one as yet in New England.

Additonally, it might be more "efficient" to snarf the files I want via
e-mail... so I have a two part question:

1.   Does anyone know of any packet mod servers in the Nashua, NH
     area?  Or even in New England.

2.   Does anyone know of any mail servers where I can snarf these
     files.

Thanks!
Noel
